

Story

Date	5 october 2026
Team ID	PNT2022TMIDxxxxxx
Project Name	India's Agricultural Production Story
Maximum Marks	5 Marks

By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for **data storytelling**, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Observations

Use these instead of the sample sales observations in the template:

- **State-wise Production:** Agricultural production varies across different Indian states, allowing higher- and lower-producing states to be compared.
- **Crop-wise Production:** Different crops contribute differently to overall agricultural production, with some crops showing higher production than others.
- **Year-wise Production Trend:** Agricultural production changes across different years, helping identify production trends over time.

- **Season-wise Production:** Production varies across agricultural seasons, showing different seasonal production patterns.
- **Interactive Dashboard:** The combination of State, Crop, Year, and Season filters allows users to explore agricultural production from different perspectives.

Activity 2:

Publish Story on Tableau Public and Paste Public link below
